

Workforce Readiness System: Managing Coaching Workflows

A blended eLearning solution teaching supervisors to plan, conduct, and document coaching conversations inside a fictional enterprise workforce-management platform.

Instructional Design

eLearning

Systems Training

Applied Practice

WRS is a fictional platform created to demonstrate instructional design capability. It is not affiliated with, or a reproduction of, any commercial software or client engagement.

WRS Coaching Center: concept UI

Designed for performance, not just completion

THE CONCEPT

A blended learning solution for supervisors managing coaching conversations inside a workforce-management platform. The course combines Articulate Rise 360, Camtasia software demonstrations, ElevenLabs AI narration, scenario-based activities, and knowledge checks to translate a multi-step system workflow into on-the-job performance support.

ROLE

End-to-end instructional design & development

TOOLS

Articulate Rise 360

Camtasia

ElevenLabs

WRS Coaching Center: concept UI

WRS is a fictional system built to showcase instructional design capability, not a reproduction of any client's software or content.

A six-stage session lifecycle drives the course

The full learning journey mirrors the exact stages a supervisor moves through inside WRS. Nothing is taught out of process order.

Progressive disclosure: each slide locks until the learner completes the required interaction, so progress reflects engagement, not just clicking through.

LEARNING OBJECTIVES

Upon completion, supervisors will be able to:

- 1 Build a complete plan for facilitating an effective coaching conversation.
- 2 Select the right coaching type and goals for each team member's development needs.
- 3 Navigate the full six-stage session lifecycle inside WRS with confidence.

Translate the application into job-ready instruction

WRS Coaching Center: supervisor view (concept UI)

System-in-context training

Learners see a realistic supervisor workspace, not a generic mockup or menu list.

Workflow orientation

Instruction is organized around the tasks supervisors actually perform, not menu-by-menu feature tours.

Performance focus

Content supports on-the-job application rather than isolated feature knowledge.

Narration and demonstration reinforce, not replace, instruction

Narration and on-screen demonstration walk through the same task two different ways, so the instruction reinforces itself rather than relying on one channel alone.

LESSON 5 OF 9

How to Attach Supporting Documents

 0:31

Attach Supporting Documents

Attach Documents to a Coaching Session

Supporting files can be linked to a session to give a fuller picture of a team member's performance and goals. WRS accepts Word, Excel, and PDF files. Common examples include role descriptions, prior performance summaries, and development plans. Attaching materials keeps everything the coach and team member need in one place.

Review the steps table, then watch the short demonstration and follow along.

LESSON 6 OF 9

How to Schedule a Virtual Session

 0:44

Schedule a Virtual Session

Prepare and Schedule a Virtual Session

The Schedule Session feature in WRS lets supervisors set up real-time coaching conversations with team members. It centralizes the date, time, format, and any prep materials so both sides arrive ready to focus on the conversation itself, not logistics.

Apply the workflow in a realistic coaching scenario

SCENARIO

Jordan is preparing for a coaching conversation with a team member who wants to take on additional responsibilities and discuss the skills needed for advancement.

LEARNER TASK

Based on the team member's development need, identify the correct coaching session type and Jordan's next action in WRS.

Bloom's level: Apply. This is the first point in the course where the learner makes a judgment call, not just recalls a step.

WRS: Coaching Center

What should Jordan do next?

Schedule a Development session and outline a skills-growth plan.

Schedule a Recognition session to celebrate current performance.

Why not: Recognition addresses past performance, not this forward-looking request.

Wait until the next scheduled review cycle to discuss advancement.

Why not: Waiting misses the moment the employee raised the goal.

Correct

A request to grow into new responsibilities is a development need, not a performance or recognition issue. A Development session is the right type, and outlining a skills-growth plan is the right first action.

Break complex workflows into usable job aids

Procedural tables give learners a scannable reference they can revisit while performing the task, outside the course, not just inside it.

Steps to Schedule a Coaching Session

STEP	DETAIL
1. Open Coaching Center.	Located under the Team menu.
2. Select the team member.	Search by name or employee ID.
3. Choose a session type.	Performance, development, or recognition.
4. Set date, time & duration.	Default duration is 30 minutes.
5. Click Save.	Confirms the session and notifies the team member.

Steps to Attach Materials

STEP	DETAIL
1. Open the session record.	Click the session from your calendar.
2. Select Add Attachment.	Found in the Documents panel.
3. Choose the file.	Accepts .docx, .xlsx, and .pdf.
4. Add a short description.	Optional, but recommended.
5. Set visibility.	Share with the team member or keep internal.
6. Click Save.	Links the file to the session record.

DESIGN CHOICES

- 1 Task-first headings
- 2 Step + detail two-column structure
- 3 Job-relevant terminology, not generic UI labels
- 4 Visual callouts for prerequisite decisions
- 5 Reusable as standalone performance support

Document the full process, not just the button clicks

Virtual Session Process

- 1 Initiate the Session:** The coach opens Coaching Center and selects Schedule Session, specifying date, time, duration, and format.
- 2 Notify the Team Member:** Once scheduled, WRS automatically sends a calendar invite and a short prep note to the team member.
- 3 Prepare:** Both sides review prior notes, current goals, and any linked performance data before the conversation.
- 4 Conduct the Session:** The coach opens the live session workspace to capture real-time notes and action items.
- 5 Log the Outcome:** After the session, the coach records outcomes, next steps, and any follow-up date directly in WRS.

WHY THIS APPROACH WORKS

- Captures system behavior a learner can't see, like WRS auto-sending the prep note after scheduling.
- Surfaces real decision points (format, session type) instead of a single prescribed path.
- Closes the loop: documenting the outcome is written in as part of the process, not left implicit.

KNOWLEDGE CHECKS

Two tiers of checking: formative, then summative

Question

02/03

Which of the following happen automatically after a session is scheduled in WRS? (Select two)

☐ WRS sends a calendar invite to both participants.

☐ The coach manually emails a reminder.

☐ A prep note is added to each participant's dashboard.

☐ The session status changes to Closed.

SUBMIT

Formative check: content stays locked until reviewed

Lesson 8 Knowledge Check: Question 2 of 3 (select two)

KNOWLEDGE CHECK EVIDENCE

Checks for understanding happen at two levels, not one.

In-lesson formative checks

Gate progress mid-lesson (e.g., after the session-lifecycle overview) so learners can't advance past a concept they haven't engaged with.

End-of-course summative quiz

Three scenario-based questions, including a NOT-style distractor and a select-two item, tied directly to the workflow just practiced, gated at 80% mastery.

WHAT THIS SAMPLE DEMONSTRATES

Design snapshot

01

Instructional strategy

Structured a nine-lesson learning journey around a real six-stage business process.

02

Systems learning

Converted a workforce-management workflow into practical, task-centered instruction.

03

Multimedia production

Integrated narrated content and software demonstrations to support skill transfer.

04

Application, Assessment & Support

Reinforced learning with a scenario-based practice activity, a mastery-gated knowledge check, and reusable job aids.
