OPERATION BRIDGELINE

Rebuild Base Life Support Under Pressure

Task Force Meridian • Kestrel Corridor AOR • 2025 • Joint Logistics & Sustainment Contract

FICTIONAL SCENARIO

I created Operation Bridgeline, Task Force Meridian, and the Kestrel Corridor for this portfolio sample. I did not base the storyboard on, and it does not reproduce, any real operation, unit, contract, or client work.

AUDIENCE: Contracting officers and program managers responsible for base life-support and logistics contracts in deployed or remote environments.

LEARNING OBJECTIVE: Given a disrupted base life-support contract, learners will be able to identify workforce-vetting risks and recommend layered vetting methods.

DESIGNER ROLE: I conducted the SME interviews, analyzed the incident for its instructional core, then scripted the scenario, designed the panel sequence, and built the storyboard shown below.

INSTRUCTIONAL APPROACH

Each panel pairs first-person testimony with narration to connect the participant's experience to the larger decision and resulting lesson.

PANEL	VISUAL DESCRIPTION	VOICE OF EXPERIENCE	NARRATOR DIALOGUE
1	<i>Wide shot: a military transport aircraft on a tarmac at dusk, personnel loading the final pallets under a fading sky.</i>	<i>"We had about seventy-two hours to clear the base. Nobody saw that order coming."</i>	In late 2024, a shift in regional strategy forced Task Force Meridian to withdraw from its forward locations on short notice.
2	<i>A briefing room. Officers gathered around a map of the Kestrel Corridor, markers tracking rotating deployment cycles.</i>	<i>"Command didn't want to fully walk away. They just wanted a lighter footprint."</i>	Leadership opted for short, periodic rotations instead of a continuous presence: boots on ground for a few weeks, then out again.

PORTFOLIO WORK SAMPLE // FICTIONAL TRAINING SCENARIO

PANEL	VISUAL DESCRIPTION	VOICE OF EXPERIENCE	NARRATOR DIALOGUE
3	<i>A wall calendar marked with recurring rotation dates, and a contracting officer at a nearby whiteboard sketching a short-term contract timeline beside a longer dotted-line plan.</i>	<i>"That rhythm held for months, until someone finally asked what happens if this goes on for years. We needed something to bridge the gap. Fast."</i>	The rotational cycle continued until leadership began reconsidering the posture needed to sustain the mission long term, and the immediate priority became securing an interim contracting solution while the team developed a longer-term plan.
4	<i>Split frame: a contracting officer at a laptop late at night, and an aerial view of the original base footprint, motor pool and storage buildings still standing, no personnel in sight.</i>	<i>"Nobody expected to be back in the region this soon, and there was still a lot of government property just sitting there."</i>	Leadership hadn't anticipated a return this quickly, and the pace of operations was outrunning the contracts meant to support it, while a significant amount of equipment and property remained in place from the original footprint.
5	<i>A fenced storage yard. Containers and vehicles under tarps, no personnel in sight.</i>	<i>"Somebody had to own that risk, and right now, nobody did."</i>	The break in continuous presence left the equipment unattended and raised a harder question: who would be accountable for it once people were back on the ground.
6	<i>A small contracting office. Phones ringing, staff juggling binders and laptops across two desks, a new hire's badge photo on a clipboard.</i>	<i>"We had three rotations of people, two vendors, and new local hires all coming on at the same time."</i>	The local contracting office found itself managing overlapping personnel rotations, vendor transitions, and new local hires, all at once.
7	<i>Two people shaking hands across a table, a contract document open between them.</i>	<i>"We proposed modifying the existing agreement instead of starting over from scratch."</i>	The team proposed a bilateral modification to the existing contract, formally extending its scope to close the gap.
8	<i>Close-up of a hand reviewing a vetting checklist beside a stack of local employment applications, one flagged with a sticky note.</i>	<i>"Paperwork only tells you so much about who you're trusting with the job."</i>	LESSON LEARNED: Vetting a local workforce takes more than checking credentials. Build layered, creative vetting methods, not just a paper review.
END OF SCENARIO			

OPERATION BRIDGELINE IS A FICTIONAL SCENARIO CREATED FOR INSTRUCTIONAL DEMONSTRATION
