

# Building an eLearning Course in Premier LCMS

*Responsibilities performed at International Paper*

## Purpose

Use this participant guide to follow a practical, job-based workflow for building, reviewing, and publishing an eLearning course in Premier LCMS.

This guide is designed for experienced Premier users who need a consistent process for taking approved learning content from course setup through LMS validation.

## Objectives

By the end of this guide, participants will be able to:

- create a course shell and metadata
- organize reusable content objects
- structure lessons, activities, and assessments
- preview before publishing
- publish and hand off a package for LMS testing

## Audience and Experience Level

**Audience:** Premier LCMS course authors and content administrators with working knowledge of the system who are responsible for building, organizing, reviewing, and publishing eLearning courses.

**Experience level:** Participants should already be comfortable navigating Premier LCMS, locating content, and working within the Courses workspace. This guide focuses on the end-to-end course-build workflow rather than basic system navigation.

ORIENTATION

# How to Use This Participant Guide

Each lesson page includes a screen area, process steps, quality checks, and a practice prompt. Work through the guide in order.

### Before You Begin

Gather the course request, storyboard, approved source content, media files, assessment items, and publishing requirements.

### How to Work

Use the screen callouts to locate the area being discussed, then complete the matching process steps before moving forward.

### Why This Matters

Correct setup makes content easier to find, reuse, maintain, track, and publish reliably to the LMS.

| # | System Area   | Process Step                        | Quality Check                |
|---|---------------|-------------------------------------|------------------------------|
| 1 | Guide page    | Review the goal and screen area.    | Know where you are working   |
| 2 | Process table | Follow each step in sequence.       | Complete each output         |
| 3 | Practice      | Apply the step to a sample course.  | Capture questions and issues |
| 4 | Review        | Compare work against the checklist. | Ready for next step          |

BEFORE YOU BEGIN

# Access and Prerequisites

Confirm the following before starting Step 1. Missing access is the most common reason a course build stalls on day one.

### System Access

Confirm you have Course Author or Content Admin permissions in Premier LCMS. Request access from your LMS administrator if the Courses workspace is not visible.

### Browser and Technical Setup

Use a current version of Chrome or Edge. Enable pop-ups for preview and publish windows. Confirm you can reach the LMS test environment used for validation.

### Materials on Hand

Have your course request, storyboard, approved source content, media files, and assessment items ready before starting Step 1.

| # | System Area     | Process Step                                                | Quality Check              |
|---|-----------------|-------------------------------------------------------------|----------------------------|
| 1 | Role check      | Confirm Course Author or Content Admin access.              | Courses workspace visible  |
| 2 | Browser setup   | Use a supported browser and enable pop-ups.                 | Preview window opens       |
| 3 | LMS test access | Confirm access to the LMS test environment.                 | Test environment reachable |
| 4 | Materials       | Gather storyboard, source content, media, assessment items. | Ready to start Step 1      |

PROCESS OVERVIEW

# Master Process: Build an eLearning Course

Use this table as the complete course-build checklist from setup through LMS handoff.

| # | System Area           | Process Step                                                              | Quality Check                          |
|---|-----------------------|---------------------------------------------------------------------------|----------------------------------------|
| 1 | Courses workspace     | Create a new course shell and confirm naming.                             | Shell saved                            |
| 2 | Course properties     | Enter metadata, audience, owner, version, and template/theme.             | Searchable, maintainable course record |
| 3 | Content library       | Add or reuse text, media, job aids, interactions, and RLOs.               | Approved content objects available     |
| 4 | Course outline        | Arrange lessons, practice, assessment, and summary in sequence.           | Logical learning flow                  |
| 5 | Review area           | Preview before publishing and resolve review comments.                    | Clean final version                    |
| 6 | Publish/export wizard | Choose SCORM/AICC settings, viewer/theme, package name, and destination.  | Package generated                      |
| 7 | LMS validation        | Upload/test launch, tracking, score, completion, and transcript behavior. | Deployment sign-off                    |

LMS Validation + Handoff

After upload, test launch, bookmarking, score, completion, transcript behavior, package/version, and any test notes needed for deployment sign-off.

# What Right Looks Like: Compliance Course Structure

Scenario: "Build a compliance course shell with three lessons, one knowledge check, one scored assessment at 80%, two attempts, and a summary."

## Course Outline: Compliance Fundamentals

### Introduction

Lesson 1: Policy Overview

Lesson 2: Reporting Requirements

Lesson 3: Escalation Procedures

Knowledge Check (practice, ungraded)

Module Assessment: Passing Score 80%, 2 Attempts

### Summary

*Sequence: intro, then lessons, then ungraded practice, then the scored assessment, then summary. Nothing scored appears before its matching practice.*

## Why This Meets the Quality Check

### ✓ Logical sequence

Lessons 1 through 3 are ordered before any practice or assessment appears.

### ✓ Practice before scored assessment

The Knowledge Check sits directly before the Module Assessment, matching the Step 4 quality check.

### ✓ Settings complete

The assessment is configured for an 80% passing score and 2 attempts, exactly as the scenario specifies.

### ✓ Clean learning path

Summary closes the module after the assessment, so the course ends on confirmation, not a test.

### ✓ Ready for LMS handoff

This structure is what Step 6 and the Wrap-Up checklist expect to see before publish and validation.

WRAP-UP

# Final Practice, QA Checklist, and Troubleshooting

Use this final page as a job aid before LMS handoff and deployment sign-off.

| # | System Area  | Process Step                                                          | Quality Check |
|---|--------------|-----------------------------------------------------------------------|---------------|
| 1 | Course shell | Title, description, audience, owner, version, template/theme.         | Complete      |
| 2 | Content      | Approved reusable objects, media, interactions, and assessment items. | Current       |
| 3 | Structure    | Intro, lessons, practice, assessment, summary, completion rules.      | Sequenced     |
| 4 | Preview      | Navigation, media, links, captions, accessibility, scoring.           | Resolved      |
| 5 | Publish      | SCORM/AICC settings, package name, version, LMS test notes.           | Ready         |

Scenario Practice

Build a sample compliance course with three lessons, one knowledge check, one assessment at 80%, two attempts, and a summary. Prepare it for LMS handoff. See the Answer Key on the previous page to check your structure.

Common Issues / Troubleshooting

If preview fails, check sequence and required fields. If assets are outdated, confirm version. If SCORM validation fails, regenerate the package and retest completion.

Final Notes / Follow-Up Questions
